

Google web fonts

(Premium only)

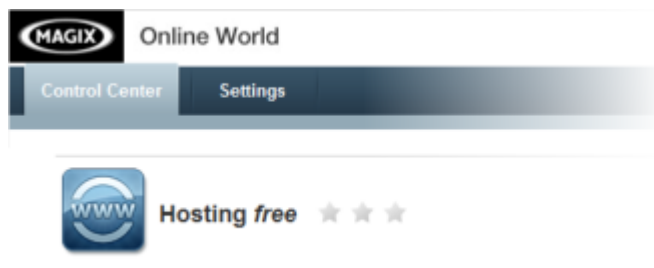

We have fully integrated Google Web Fonts in Web Designer 9. And it's easy to add Google fonts from their full 600+ list, simply browse and search through the font list, including font previews at any font size, select and automatically download and install any font in your Windows computer.

New font picker

'M' hosting option & simpler publishing

Web Designer includes 500 Mbytes of MAGIX Online World web hosting space for free, and requires no configuration, just a simple sign-in. Web Designer Premium has an enhanced 'M' hosting package with 2GB of space and a free top level domain.

Improved page background handling

- Right click for a new menu that lets you edit the backdrop or page color
- A new Designs Gallery section contains a selection of drag 'n' drop background designs
- Supports the new drag 'n' drop re-coloring methods for easy re-coloring (see below)
- Efficient tiling texture backgrounds
- Fixed backgrounds (stay fixed as the page scrolls over the top)

NavBar replacement

You can now replace the complete design of a NavBar with an alternative design from the Designs Gallery by just dropping the new design onto an existing NavBar.

Original NavBar

Replacement NavBar

Color matched, replaced NavBar

Improved HTML5 & CSS3 compatibility

Graphic features such as background panels, rectangles, rounded rectangles, and objects with shadows are now exported as native HTML5, providing a more efficient and faster website download.

Features that now export as HTML5/CSS3 include:

- Rectangles, rounded rectangles, with optional simple outline, linear graduated fill (single or multi-stop) and simple flat transparency
- Rotated or skewed rectangles
- Box Shadows (black or colored shadows)
- Text with shadows
- Page backgrounds, simple grad fills or more complex ones made up from tiling textures

Object re-coloring

Web Designer 9 introduces a much improved way of re-coloring clipart, or anything made from a group of vector artwork, such as buttons, NavBar, text panels, headers and the new backgrounds.

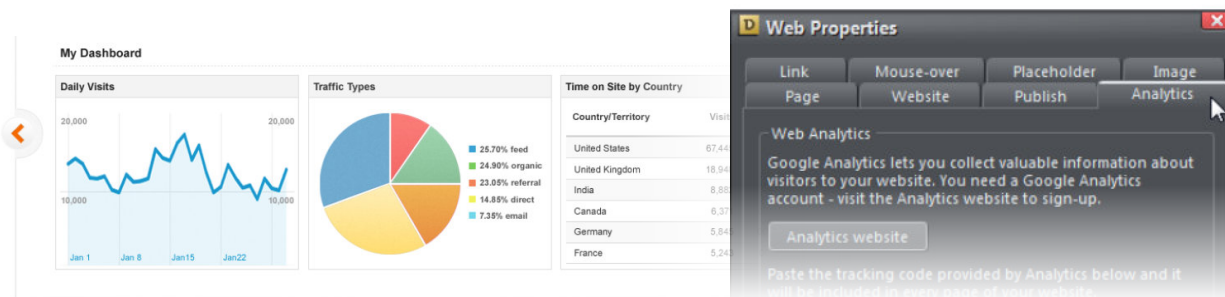

Retina® screen compatibility (Premium only)

Web Designer 9 automatically creates high-resolution photos and web graphics for you. The web pages are smart and only load the correct resolution graphics for the browser being used.

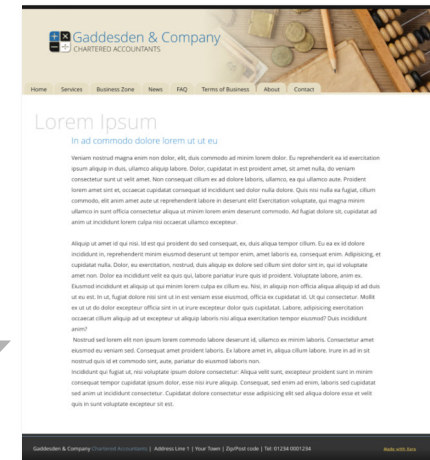

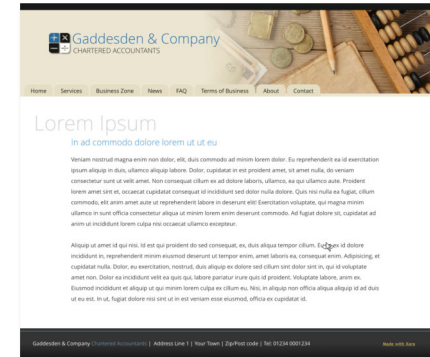

Google Analytics (Premium only)

This free service from Google is the industry standard method of tracking website visitor numbers and a range of other useful statistics. Simply copy and paste your tracking code into the new Analytics tab of the Web Properties dialog (a free Google Analytics account is required).

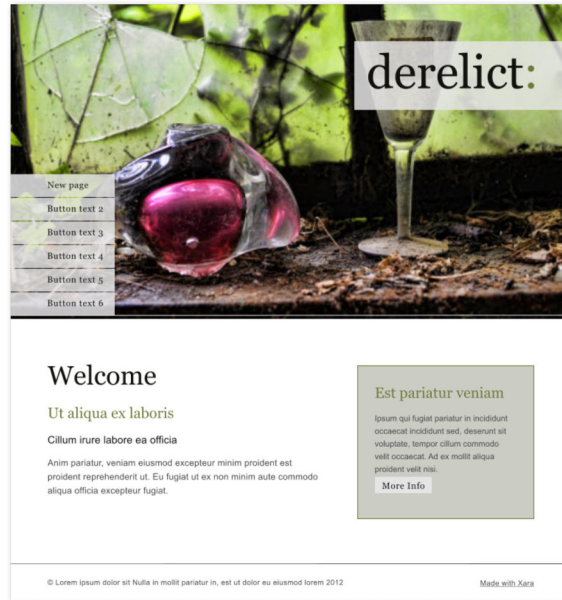

Automatic object positioning & page resize

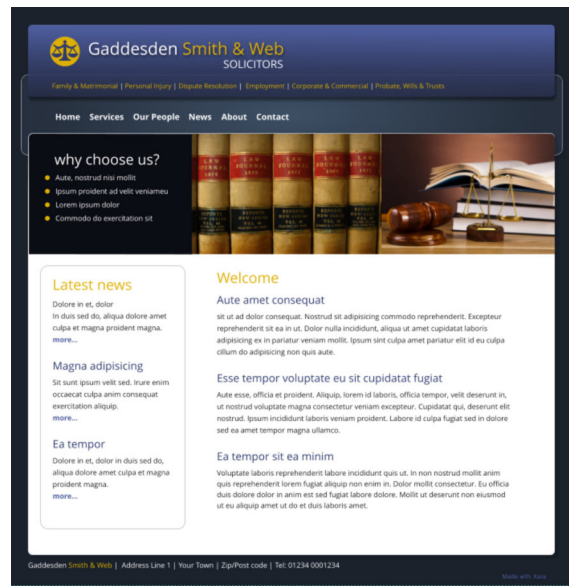

You can now add, edit and remove text in any part of the page, all affected page elements now automatically grow and shrink to accommodate the changes.

20 new general themes (Premium only)

100+ business themes (Premium only)

A range of new widgets

Web Designer 9 includes a number of new widgets (third party interactive objects you can place on your website, adding useful features & functionality and/or a bit of pizzaz!). Just drag them from the Designs Gallery (in Page Elements & Widgets) onto your page to place and configure the widgets.

Google AdSense is a flexible, hassle-free way to earn revenue by hosting relevant ads alongside your website content (Page Elements & Widgets > Other Widgets).

Google+, a button and badge widget. Bring more traffic to your site by encouraging visitors to share your page with other members of the Google+ network (Page Element & Widgets > Social Networking Widgets).

Plus there's a new table widget, for creating simple sortable tables from csv data. (Page Elements & Widgets > Other Widgets).

Table Widget

Categories	Apples	Pears	Oranges
John	8	4	6
Jane	5	7	9
Joe	8	6	7

Navigation: 1/2

Six new photo related widgets

Available from Designs Gallery > Page Elements & Widgets > Photo Elements & Widgets > Photo Slideshows

These provide a range of slick photo effects using Javascript and CSS animations for your website (compatible with all modern browsers including tablets and phones).

'Infinitely wide' effects with, for example, graduated fills, bars and/or textures stretching across the whole of the website background, are increasingly popular. In Web Designer 9 Premium the Designs Gallery contains a new collection of color and resolution editable graduated fills, repeating bar designs and tiling textures. Perfect for trendy full width backgrounds.
